EDUCATION

Cornell University, College of Arts and Sciences

Aug 2023 - Expected May 2027

Bachelor of Arts in Information Science

Concentration: Data Science

Relevant Coursework: Data Science, Statistics, Causal Inference, Human-Computer Interaction, Web Design, Python Programming

SKILLS

Analytics: SQL, Python, Pandas, DuckDB, NumPy, Excel, Tableau, Matplotlib, Jupyter

Product / Research: user research, task-based interviews, usability testing, requirements gathering, information architecture, prioritization, wireframing/prototyping (Figma)

Technology: JavaScript, HTML/CSS, Flask, React, REST APIs, Git/GitHub, technical documentation

EXPERIENCE

Administrative Assistant | Cornell University | Ithaca, NY

Aug 2023 - Present

- Manage service-center records and high-volume requests for 10,000+ students and faculty while maintaining accurate operational documentation.
- Streamlined data-entry and scheduling workflows, improving reporting accuracy and record retrieval speed by 20%.

Junior Data Analyst Intern | Equity Bank | Kigali, Rwanda

Jun 2025 - Aug 2025

- Automated financial-data validation, cleaning, and transformation with Python, Pandas, and Excel, reducing analyst preparation time by 10%.
- Structured complex financial data for downstream dashboards and partnered with engineering and operations teams to improve reporting workflows and handoffs.
- Diagnosed and corrected inconsistent financial records, improving regional reporting accuracy by 15% and strengthening audit-ready outputs.

Event Assistant | Cornell Conference & Event Services | Ithaca, NY

May 2024 - Aug 2024

- Coordinated digital registration, vendor logistics, and live operational tracking for 15 large-scale events serving 20,000+ cumulative attendees.
- Maintained time-sensitive event records and cross-team communications to support consistent execution during peak-volume periods.

PROJECTS

F1 Novice Interface Redesign & UX Research

HCI | UX Research | Figma

- Evaluated the F1 app, F1 TV graphics, and third-party dashboards using Nielsen heuristics and HCI principles to identify novice-user friction in timing, tires, telemetry, and driver tracking.
- Conducted task-based usability research to test whether new viewers could interpret gaps to leader, sector colors, tire compounds, and race-state information without prior F1 knowledge.
- Translated research findings into a novice-friendly F1 viewing interface redesign, simplifying information hierarchy and surfacing race context through clearer visualizations and interaction patterns.

Job Market & Skills Analysis

SQL | Python | Relational Modeling

- Cleaned and normalized a 124K+ LinkedIn job-postings dataset for SQL analysis of early-career compensation, skills, role families, industries, and U.S. locations.
- Built a relational schema across postings, companies, skills, industries, and locations to support joins, CTEs, window functions, and reproducible market comparisons.
- Analyzed skill co-occurrence, salary-to-experience tradeoffs, industry differences, and location opportunity density for early-career roles.

Bookmatch - Book Discovery Application

Flask | JavaScript | REST API

- Engineered and shipped a book-discovery product integrating Open Library REST APIs, defining recommendation logic, user filters, and failure states to reduce search friction.
- Designed transparent recommendation logic and resilient loading, error, and empty states so users can understand why each title was returned.
- Normalized inconsistent Open Library metadata and implemented author/year filters, pagination, persistent reading lists, and loading/error/empty states.
