EDUCATION

Cornell University, College of Arts and Sciences Aug 2023 - Expected May 2027
Bachelor of Arts in Information Science
Concentration: Data Science
Relevant Coursework: Data Science, Statistics, Causal Inference, Human-Computer Interaction, Web Design, Python Programming

SKILLS

Analytics: SQL, Python, Pandas, DuckDB, NumPy, Excel, Tableau, Matplotlib, Jupyter
Product / Research: user research, task-based interviews, usability testing, requirements gathering, information architecture, prioritization, wireframing/prototyping (Figma)
Technology: JavaScript, HTML/CSS, Flask, React, REST APIs, Git/GitHub, technical documentation

EXPERIENCE

Administrative Assistant | Cornell University | Ithaca, NY Aug 2023 - Present
- Manage service-center records and high-volume requests for 10,000+ students and faculty while maintaining accurate operational documentation.
- Streamlined data-entry and scheduling workflows, improving reporting accuracy and record retrieval speed by 20%.

Junior Data Analyst Intern | Equity Bank | Kigali, Rwanda Jun 2025 - Aug 2025
- Automated financial-data validation, cleaning, and transformation with Python, Pandas, and Excel, reducing analyst preparation time by 10%.
- Diagnosed and corrected inconsistent financial records, improving regional reporting accuracy by 15% and strengthening audit-ready outputs.
- Partnered with engineering and operations teams to improve reporting workflows and handoffs, translating cleaned financial data into dashboard-ready outputs.

Event Assistant | Cornell Conference & Event Services | Ithaca, NY May 2024 - Aug 2024
- Coordinated digital registration, vendor logistics, and live operational tracking for 15 large-scale events serving 20,000+ cumulative attendees.
- Collaborated with event leads, vendors, and campus partners to coordinate logistics, resolve time-sensitive issues, and keep high-volume events running smoothly.

PROJECTS

Race Lens - F1 Interface Redesign UX Research | Product Design | JavaScript
- Conducted interviews on existing F1 interfaces and audited broadcast and app experiences to identify novice friction in timing gaps, tyre data, race state, and driver tracking.
- Built a novice-friendly interactive race replay prototype, then ran usability testing to validate the clearer hierarchy, contextual explanations, driver controls, and progressive disclosure.

The McQueen Effect - Lewis Hamilton Career Analysis Python | Data Viz | JavaScript
- Analyzed Hamilton's 2007-2026 YTD career using win, podium, and pole rates, teammate head-to-heads, points share, and constructor context.
- Built an interactive visual story and reproducible analysis separating absolute results from teammate-relative performance, with documented sources and limitations.

Job Market & Skills Analysis SQL | Python | Relational Modeling
- Cleaned and joined 14,681 LinkedIn job postings with company, skill, industry, and salary tables to compare analyst, product, and BI role families.
- Analyzed seniority, compensation, industry concentration, and tool demand, then presented findings in a reproducible notebook and executive-style data story.

Bookmatch - Book Discovery Application Flask | JavaScript | REST APIs
- Engineered and deployed a book-discovery product combining Google Books and Open Library with multi-concept ranking, filters, pagination, and persistent reading lists.
- Designed explainable match logic and resilient loading, error, empty, and missing-metadata states so users can understand why recommendations were returned.
